Please note that the CRRC does not set a minimum definition for "cool", the CRRC simply lists the measured radiative property values on our Directory. A product's placement on the Directory does not mean that the product is "cool" as defined by any particular code body or program.

*CRRC Rapid Ratings: These are interim laboratory-aged values that simulate weathered values. These values will be replaced with the measured three-year aged values upon completion of the weathering process. SRI values calculated using Rapid Ratings may change once the aged rating replaces the interim rating.
